SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 2 – Technical Presentation

Course Code:	DSA03	**Course Title:**	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	**Assessment:**	Assessment Tool 2 – Technical Presentation
Weightage:	30% of CIA		
CO1 Statement:	Analyse NLP models, regular expression patterns, finite state automata, morphological processing techniques and to interpret language processing. (BL-3)		
Student Name:	A. Abhishek Reddy	**Reg. No.:**	192424192
Section / Batch:	AI&DS(2024-2028)	**Date:**	22/10/2026

Code of Conduct

I A. Abhishek Reddy (192424192) *(Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.*

Signature of the Student: A.Abhishek Reddy

Instructions

- Suggested Team Member Roles (3 Members)
- Member 1: Theory, Concepts, and Literature Review
- Member 2: Algorithm Design, Models, and Technical Analysis
- Member 3: Demonstration, Case Study, Applications, and Conclusion

- GPS photo must submit.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	NLP Models, Language Processing Evolution	TP-01
Comparative Study of NLP Models and Algorithms	Model Analysis, Algorithm Comparison	TP-02
Regular Expressions for Real-World Text Processing	Pattern Matching, Information Extraction	TP-03
Designing Efficient Regular Expression Patterns for Information Extraction	Text Mining, Data Extraction Techniques	TP-04
Finite State Automata in Natural Language Processing	State Transitions, Language Recognition	TP-05
Building a Finite State Automaton for Token Recognition	Lexical Analysis, Token Validation	TP-06
Morphology and Word Formation in Natural Languages	Morpheme Analysis, Word Structure Processing	TP-07
Inflectional Morphology: Understanding Grammatical Variations	Grammatical Analysis, Word Normalization	TP-08
Derivational Morphology and Vocabulary Expansion	Word Generation, Semantic Transformation	TP-09
Comparative Analysis of Inflectional and Derivational Morphology	Morphological Classification, Language Analysis	TP-10
Finite-State Morphological Parsing Techniques	Morphological Parsing, Finite-State Processing	TP-11
Morphological Analysis for Indian Languages	Language-Specific Morphology, NLP Challenges	TP-12

Porter Stemmer: Design, Working Mechanism, and Applications	Stemming Algorithms, Text Preprocessing	TP-13
Stemming vs Morphological Parsing: A Comparative Study	Word Reduction, Morphological Processing	TP-14
Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	End-to-End Language Processing Pipeline	TP-15

Annexure A – Technical Presentation

Team No.	Technical Presentation Title	Description
1	Evolution of Natural Language Processing: From Rule-Based Systems to Modern NLP	Analyze the historical development of NLP models, key milestones, and how language processing has evolved from handcrafted rules to intelligent systems.
2	Comparative Study of NLP Models and Algorithms	Explore different NLP models and algorithms used for language processing, comparing their working principles, strengths, and limitations.
3	Regular Expressions for Real-World Text Processing	Demonstrate how regular expressions are used for data validation, text extraction, log analysis, and information retrieval in practical applications.
4	Designing Efficient Regular Expression Patterns for Information Extraction	Analyze complex regular expression patterns used to extract emails, phone numbers, URLs, dates, and structured information from unstructured text.
5	Finite State Automata in Natural Language Processing	Explain the concepts of deterministic and non-deterministic finite automata and their role in lexical analysis and language recognition.
6	Building a Finite State Automaton for Token Recognition	Design and demonstrate a finite state automaton that recognizes tokens such as identifiers, keywords, and numbers in textual data.
7	Morphology and Word Formation in Natural Languages	Investigate how words are structured and formed using morphemes, and analyze the importance of morphology in NLP systems.
8	Inflectional Morphology: Understanding Grammatical Variations	Examine how inflectional changes affect word forms based on tense, number, gender, and case across different languages.

Team No.	Technical Presentation Title	Description
9	Derivational Morphology and Vocabulary Expansion	Analyze derivational processes that create new words and study their impact on semantic interpretation and language understanding.
10	Comparative Analysis of Inflectional and Derivational Morphology	Compare the characteristics, applications, and challenges of inflectional and derivational morphology in NLP tasks.
11	Finite-State Morphological Parsing Techniques	Explore finite-state transducers and parsing techniques used to analyze and generate morphological structures in natural languages.
12	Morphological Analysis for Indian Languages	Study the challenges and solutions involved in performing morphological processing for morphologically rich Indian languages such as Tamil, Hindi, and Telugu.
13	Porter Stemmer: Design, Working Mechanism, and Applications	Analyze the Porter Stemming algorithm, its rule-based approach, implementation steps, and role in information retrieval systems.
14	Stemming vs Morphological Parsing: A Comparative Study	Compare stemming and morphological parsing techniques based on accuracy, computational complexity, and application scenarios.
15	Integrated NLP Pipeline: From Regular Expressions to Morphological Processing	Demonstrate a complete NLP preprocessing pipeline incorporating regular expressions, finite state automata, stemming, and morphological analysis for text processing.

Rubrics for Calculation

Technical Presentation					
Criteria	**Weightage**	**Level 4 – Exemplary**	**Level 3 – Proficient**	**Level 2 – Developing**	**Level 1 – Beginning**
Technical Content Accuracy	30	Highly accurate, in-depth, and insightful technical explanation	Technically correct content with adequate depth and clarity	Basic concepts presented with limited accuracy and depth	Content contains major technical errors; concepts

					poorly understood
Problem Identification	25	Problem rigorously analyzed using appropriate and advanced methods	Problem clearly defined with a logical engineering approach	Problem identified but analysis or methodology is weak	Problem statement unclear or incorrect; no logical approach
Use of Tools	20	Advanced tools, well-analyzed data, and highly effective visuals	Appropriate tools and data used effectively with clear visuals	Limited use of tools and basic data interpretation	Minimal or incorrect use of tools and data; poor visuals
Communication	15	Highly engaging, confident, and audience-focused delivery	Clear, organized, and professional communication	Understandable but lacks clarity, structure, or confidence	Poor organization, unclear speech, ineffective slides
Professionalism	10	Exemplary professionalism, leadership, and ethical awareness	Professional conduct with effective team collaboration	Basic professionalism; uneven team participation	Lacks professionalism; minimal contribution or ethical awareness

Team No. / Criteria Level	**Technical Content Accuracy**	**Problem Identification**	**Use of Tools**	**Communication**	**Professionalism**	**Total %**

Faculty In-charge	**Course Coordinator**	**Program Director**

Evolution of Natural Language Processing : From Rule-Based Systems to Modern AI

DSA0311 – Natural Language Processing

PRESENTED BY:

ANKIREDDY ABHISHEK REDDY - 192424192

SUPERVISED BY:

Dr. Veeramani

Introduction

- NLP stands for Natural Language Processing.
- It is a branch of Artificial Intelligence (AI).
- It helps computers understand and process human languages.
- NLP is used in chatbots, translation, voice assistants, and text analysis.

Example: Google Translate converts text from one language to another.

Early NLP – Rule-Based Systems

- Early NLP systems used manually written rules.
- Linguists and programmers created grammar and vocabulary rules.
- Systems followed fixed instructions to process sentences.
- They worked well for simple tasks but struggled with complex language.

Example: A chatbot replies “Hello” when the user types “Hi.”

Limitation: It cannot easily understand sentences that are different from its predefined rules.

Statistical NLP and Machine Learning

- NLP started using statistics and data to understand language patterns.
- Machine learning models learned from examples instead of depending only on fixed rules.
- They improved tasks such as spam detection and speech recognition.
- Their performance depended on the quality and amount of training data.

Example: An email system learns to identify spam messages.

Deep Learning in NLP

- Deep learning uses artificial neural networks.
- Models learn complex patterns in words and sentences.
- Word embeddings represent words as numerical vectors.
- Recurrent Neural Networks (RNNs) and LSTMs helped process sequences of text.

Example: A translation system uses the context of a sentence to produce a better translation.

Transformers and Modern NLP

- The Transformer architecture was introduced in 2017.
- It uses an attention mechanism to identify relationships between words.
- Large Language Models (LLMs) are trained on large amounts of text.
- Modern NLP can generate text, answer questions, summarize documents, and assist with coding.

Examples: ChatGPT, BERT, and Google Translate.

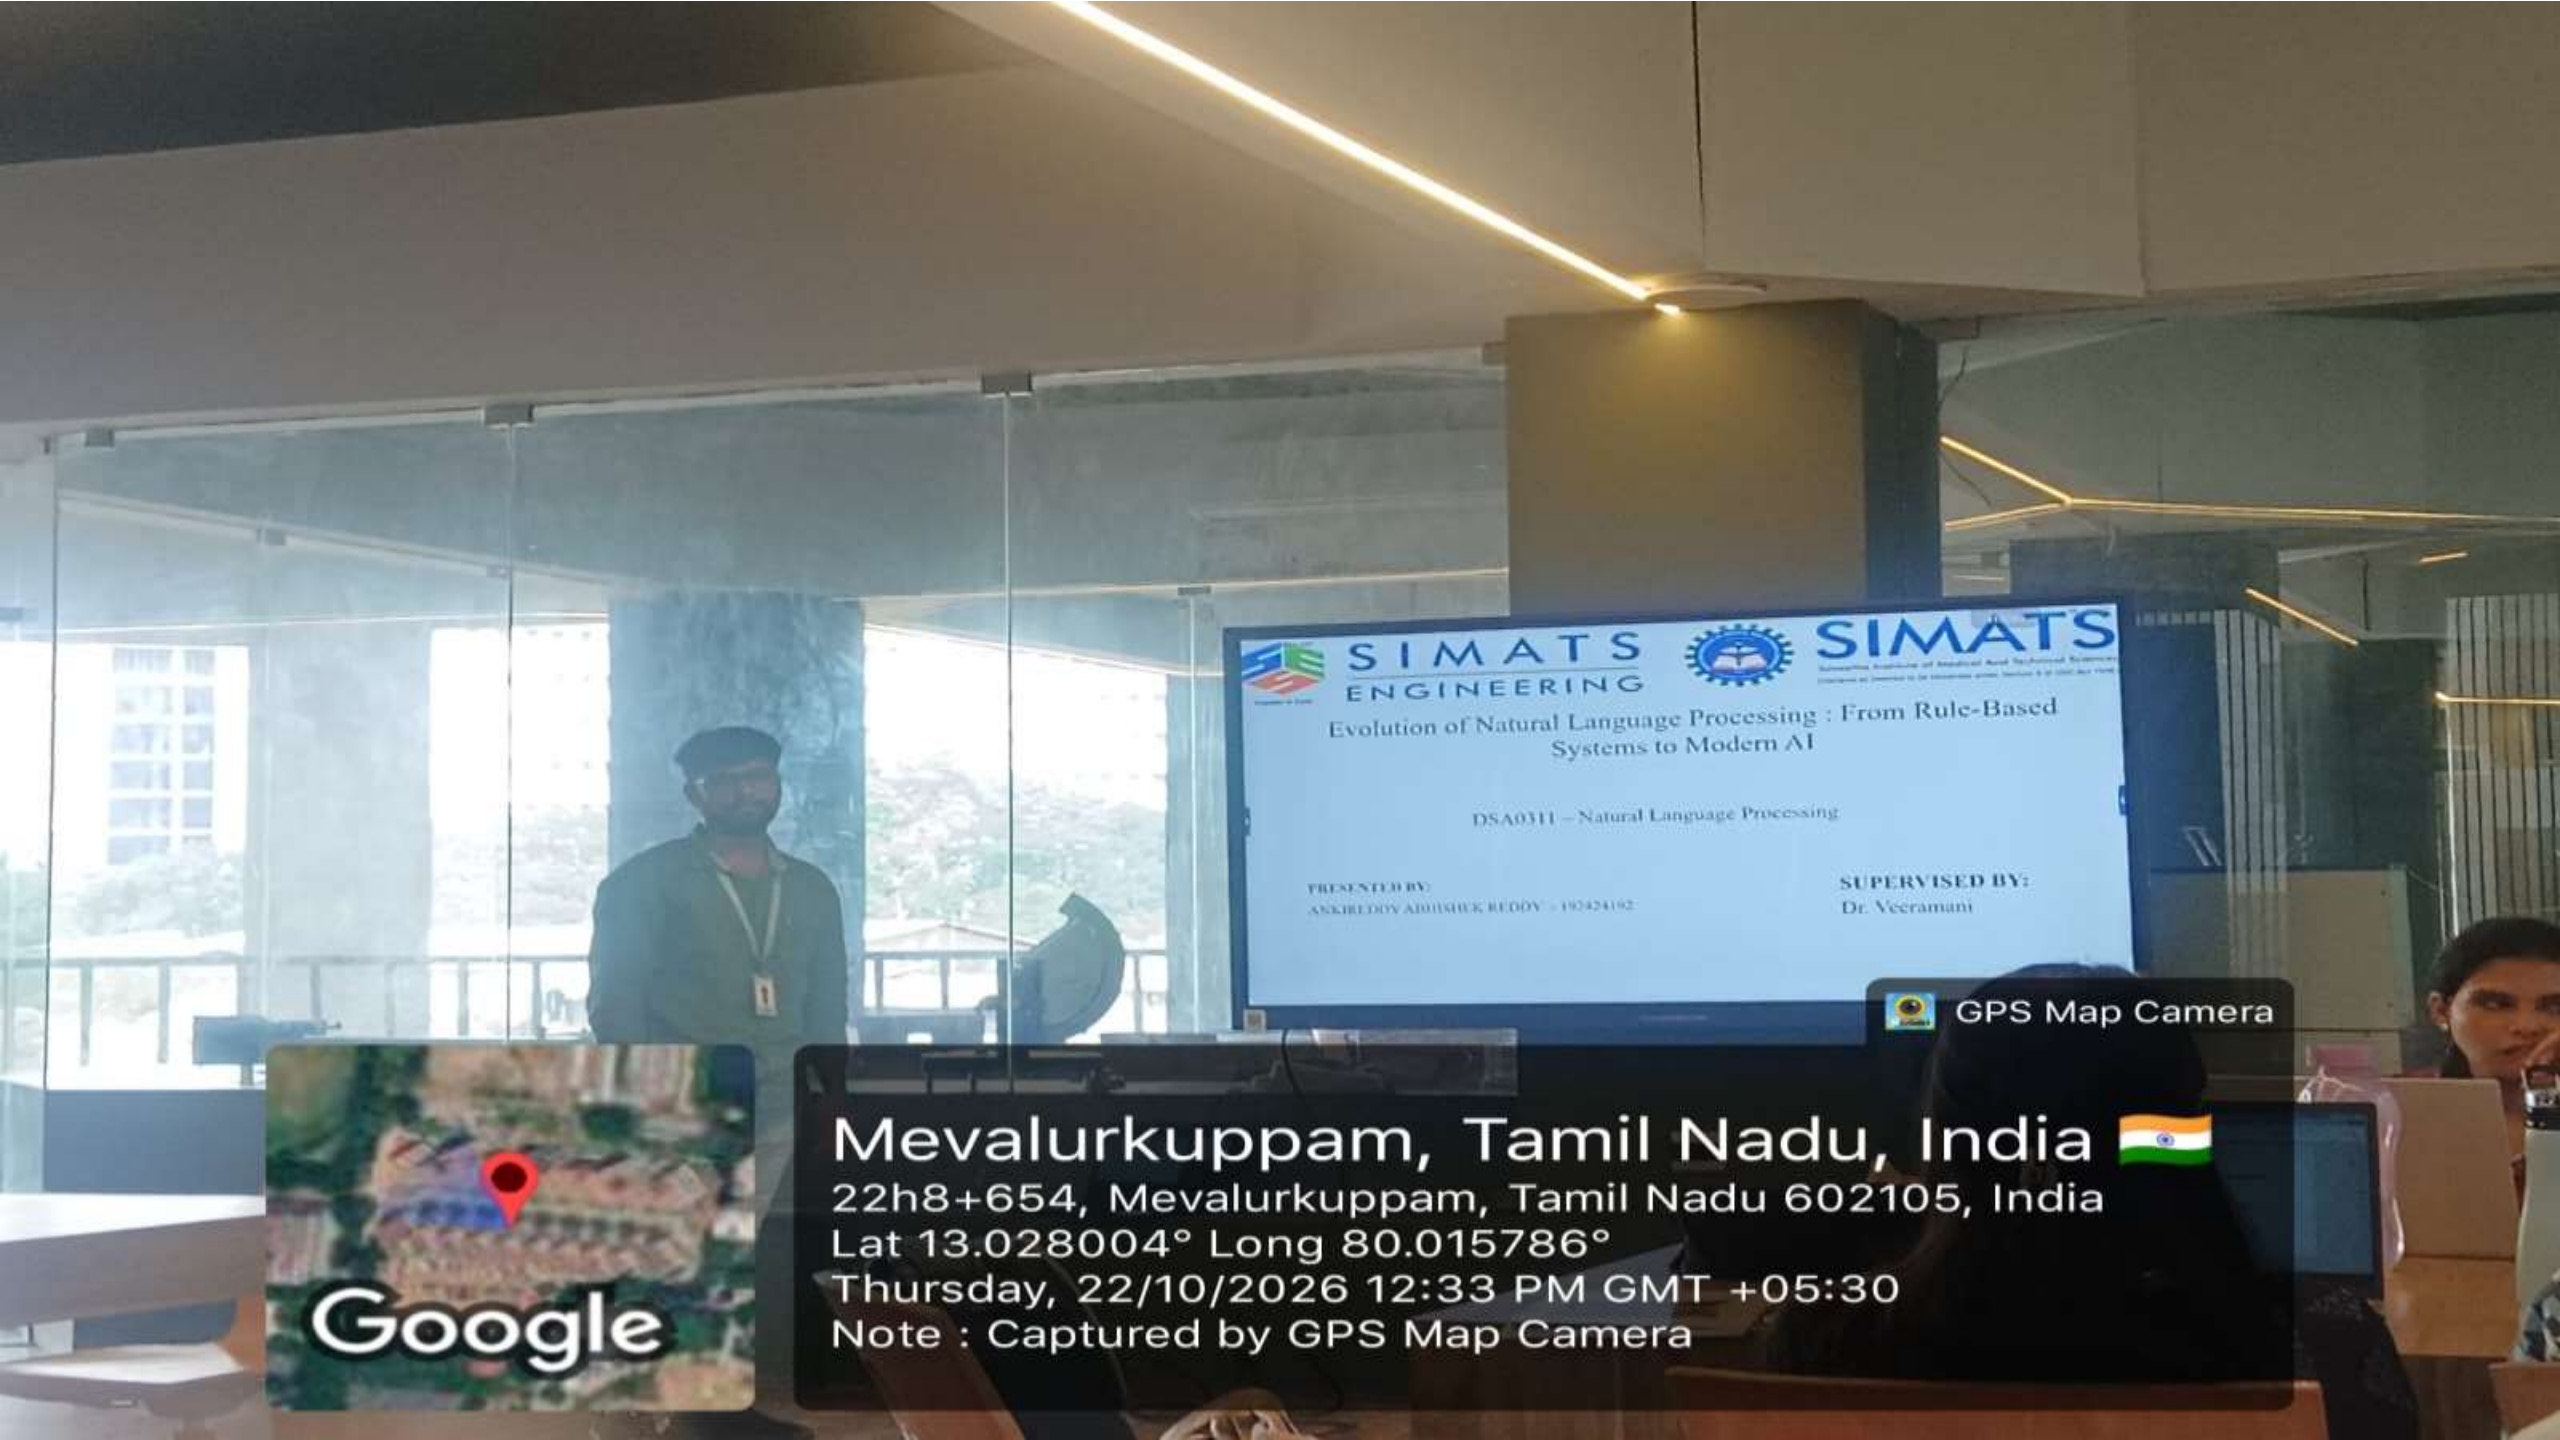

How to explain: “Transformers made a major improvement in NLP. Modern models can understand context and generate human-like responses, although they can still make mistakes.”

Applications and Conclusion

- Chatbots: Answer user questions.
- Translation: Convert one language into another.
- Healthcare: Help analyze medical documents.
- Education: Support learning and writing.
- Business: Analyze customer feedback and reviews.

Conclusion

- NLP evolved from fixed rules to machine learning, deep learning, and modern language models.
- These advances have made language processing more flexible and powerful.
- The future of NLP focuses on better accuracy, multilingual support, and responsible AI.
